

Given two integer **x** and **y**, using **Conditional or Ternary** expression, print "**Robin**" if the value of x is **less** than or **equal** to y else print "**Rahul**" (without quotes).

**Sample Input:**

x = 10  
y = 9

**Sample Output:**

Rahul

**Code:**

```
#include<iostream>

using namespace std;

int main() {
    int x, y;
    cin>>x>>y;
    if(x<=y)
    {
        cout<<"Robin";
    }
    else{
        cout<<"Rahul";
    }
    return 0;
}
```
