```java
import java.lang.*;

import java.util.*;

public class Main {

    public static void main(String[] args) {

        /*

        Assign values to the following variable as described above

        Don't change the variable name

        */

        String mystring1="InterviewBit";

        String mystring2="Don't change the variable name";

        int myint=11;

        boolean myboolean=true;

        /Don't change the code below/

        System.out.println("String1 = " + mystring1);

        System.out.println("String2 = " + mystring2);

        System.out.println("int = " + myint);

        System.out.println("boolean = " + myboolean);

    }

}
```
